Part 6 Galerie de Paleontologie

66

On the back wall of Dr. Geffard's lab are cabinets that contain more drawers than she can count, and he lets her open them one after another and hold seashells in her hands - whelks, olives, imperial volutes from Thailand, spider conches from Polynesia - the museum possesses more than ten thousand specimens, over half the known species in the world, and Marie-Laure gets to handle most of them."

(...)

Paleontology smells like rock dust, bone dust... In her imagination, in her dreams, everything has color.

(...)

The museum buildings are beige, chestnut, hazel.

Information

In this last part we will make our final stop at the Galerie de Paleontologie; a department full of skeletons of old creatures and fossils from thousands of years ago.
